Mr. ABC
Royal Bank of Canada Centre
155 Wellington St W
Toronto, ON M5V 3H6

Dear ABC

I would be delighted to be working at the Royal Bank of Canada (RBC) this fall as an Artificial Intelligence Developer (student). It would be an honour contributing to the applied AI research with the RBC Wealth Management AI team.

There was a time when I learnt Data Science concepts and started coaching students on India's largest e-learning platform - Unacademy. Not only this, I was so determined to work in the Data Science field that I strived to intern at the Eckovation Solutions Pvt. Ltd., where I got a handsome opportunity to sharpen my Python programming and Machine Learning skillset. It was this moment when I realized the potential of Big Data technology and decided to publish a research paper in the International Journal of Computer Applications (IJCA). The COMP-8590 (Machine Learning and Optimization) course at the University of Windsor, motivated me further to advance my career in Artificial Intelligence where I worked on the real-world situation of building a gap between normal and deaf-mute people using AI technology. Also, I worked on several personal AI projects including Emotion-Predictor which predicts emotions of a random person using a Deep Learning model which is backed by a huge dataset consisting of 30,000 plus face screenshots from Bollywood movies.

Being the first and only GitHub Campus Expert in the Windsor-Essex region, I have contributed to the local community with Artificial Intelligence and team-building activities and in return, I got a chance to whet my communication skills (written and verbal), leadership and team-work abilities. Also, the BSMM-8130 course played a crucial role in honing my time management and public speaking abilities. Being the Co-founder and Technical Team Lead at WinHacks - Windsor's first major hackathon, I took my leadership and technical know-how to the next level, where I successfully presented a tech-talk, in association with GitHub, regarding version control and software development to a mix group of audience.

I hope to see myself in an interview with you and discuss my work tasks so I can start adding significance to your organization. I thank you wholeheartedly for your valuable time.

Regards

Sanyam Sareen
